

Hopton. 1614.

**A New Alma-
acke and Prognostica-
tion, for the yeare of our
Lord God. 1614.**

Being the second after Leap yeare.

With blanch leaves, new rules
and necessary Tables.

**The Astronomicall Calcu-
lations being principally refer-
ed to the Meridian and lati-
tude of the ancient Shire-
towne of Whitch-
bury.**

By Arthur Hopton, Gent.

Cum Privilegio

To the Reader.

Gentlemen, in the end of the Epistle in my Geodeticall Staffe, I promised an Instrument called, *Clauus Mathematica*; or, the *Key of the Mathematickes*, long since computed, vpon the which Key there be foure lines of speciall vse, the first is a line deuided into certaine equal parts, for the proportionall deuiding of lines, and the working of the Art of *Arithmetick*, &c. The second is a line vnequally deuided into proportional squares, for the measuring and proportioning all kinde of superficies, with the extracting of the square Root. The third is a line *Sinnically* projected, partly by which all conclusions *Astronomicall*, *Cosmographicall*, *Nauticall*, and *Geodeticall* &c. are resolved, with the Doctrine of Triangles, and thereby *Longimetra* and *Altimetra* that is, all distances and heights is easily performed. The last is a line of proportionall Cubes, for the speedy extracting of any Cubique Roote, or measuring and proportioning any solid body as Timber, &c. to which is added lines *Tangents* and *Secants*, and also other lines taken from particular Authors, as *Linea Metalica*, for the measuring of Metals, as Gold &c. lines *Poligraphicall*, for manifested Figures, Lines *Tetragonickall*, for the squaring all kinde of Figures, with particular lines for inscribing and circumscribing all kind of Figures and bodies, &c. with the Cubing of any Sphere or Platonicall body, &c. *et Contra*. The which Instrument is perfectly made in Brass, by *Elias Allen* ouer against S. Clements Church, without Temple-Barre, the projection and perfect vse whereof, I intend to publish for a generall good, not concealing any particular wit or Author that hath furthered the perfection of my long trauell and study in this behalfe, meaning thereby to resolve most propo: in *Euclid* and *Ramus*, hoping none will maliciously destract or abgandy dirogate.

Ar: Hopson.

Briefe Notes concerning the Tearmes and their Returnes, &c.

For that I haue discourſed often times of this matter in my yearely Prognostications, and also for that it is remembred of late once for all, in my *Concordancy* of yeares, dedicated to the Honourable, Sir Edward Cooke, Knight, and Lord Chiefe Iustice of the Common Pleas, I will heere be breete.

The foure dayes wherof euery returne doth consist, are these with their significations.

First, the *Essoyne* day, is for the defendant in a perſonall action, or the tennant in a reall action to be Eſſoyned, after which day, any writ or Commission may not be executed, being directed out of any Court.

The second, the day of *Exceptions*, for the Plaintiff or demandant to lay an *Exception*, if no *Essoyne* before were cast.

The third, is *Returna Breuium*, that is the day when cou the Sheriffe must returne the writ.

The fourth, is the day of *Apparance*, which are for part & Jurors to appeare in the Court of Common Pleas.

In which Court all the said daies haue most vſe. For in other Courts, tis *quarto die poſt*.

Vacation betwixt the Tearmes.

Betwixt	{	Hilary and Eaſter, is xv. weekes and two daies.
		Eaſter and Trinity, is two weekes and five daies.
		Trinity and Michaelmas, xii. weekes & five daies
		Michaelmas and Hilary, eight weekes.
No hall daies in	{	Hilary Terme, on the Purification day.
		Eaſter Terme, on the Aſcenſion day.
		Trinity Terme, on S. Iohn Baptiſt day.
		Michaelmas Terme, on All-Saints day.

A breefe remembrance of some memorabile things, and first according to the Computation of *Origanus*, for this yeare 1614.

Since the	{	Creation of the world	5584	{	5628
		vnuerfall flood	3927		5577
		promise to Abraham	3560	{	Iosephs Scale.
		Israelites departed out of Egypt	3130		
		building of Salomons Temple	2650		
		captiuitie of Babylon	2219		
		passion of Christ	1581		
		building of the City	2365		
		King Nabuchadnezzar death of Alexander.	2362 1928		

Other notes, as they haue bene, (and are to be) proued by Scripture.

From the Creation to the flood 1656 yeares and six daies to; 6. daies after the creation, Adam was made.

From the flood vnto Abrahams departing from Chalde are 423 yeares, ten daies.

From Abrahams departing from Vr in Chalde, vnto the departing of the Children of Israel from Egypt, is 430 yeares.

From the departing of the Israelites, to the first building of the Temple, is 480 yeares.

From the building of the Temple, to the captiuitie of Babylon, are 441 yeares and a halfe.

From the captiuitie to the re-edifying of Ierusalem is 143 yeares.

From the re-edifying of the City to the death of Christ, are 478 yeares.

From the incarnation to the 25 of March, is 1614. Whereby we reckon that from the Creation to this yeare 1614. is 5631 yeares, six months, and sixteen daies; for from the Creation to the Conception, is 4017 yeare and a halfe, and six daies, which added to this present yeare 1614. maketh 5631. yeares &c. as before.

In all kind of writings and matters legall, the year begin-
neth vpon the 25 of March, supposed to be the first day of
the Creation of the world, and the day on which Christ was
conceiued, for the Church and lawes of England medleth
not with the Iulian year, beginning the first of Ianuary.
Note, the Golden number and Dominicall Letter, change
the first of Ianuary, and the Epact the first of March.

The Moone being betwixt Capricorne and the end of Gemini, called the halfe of long deſcention, or aſcending part in North latitude, & in her ſwift motion, ſhe may be ſeene the ſame day as the change is, but contrary: being in the deſcending halfe of the Zodiaque in South latitude and ſlow motion, it may be ſoure dayes before ſhe be ſeene. Note Eaſter day was neuer paſſing one day higher.

May hath xxxj. daies.

In May we may make merry, if we May;
 in May betimes, we may goe gather May;
 We May, and May not in the month of May,
 some May so much, they May no more in May.

The third day Christ ascended. The fifteenth day the Jewes kept their Whitsontide: and the same day God sent them Quails. The 16. day it rained Manna from Heaven. The 17. day Naab entered the Arke. 22. day part of the *Iſraelites* for their murmuring, were consumed with fire. 27. Naab was commaunded to goe forth of the Arke. Gen. 8, 14, 16.

June hath xxx. daies.

When Haruest comes, ge Church-men seeke your own
the tenth is yours, of Hay, or what is sowne:
Then feede their Soules, (that do your bodies feede)
by preaching more, then quarter-wise for neede.

July hath xxxj. daies.

The heate doth burne, excelle is worse then wall,
for too much Hony doth the mouth distall:
As sweete of double Benefice doe note,
which makes a Priest not Preach, or loose his throte.

2

August hath xxxj. daies.

No month is good, but hath some day as bad,
no Realme is true, that neuer Traynor had:
As the fift day heereof, doth fatall ling,
of bloody men that fought to slay their King.

Now sing and mourne we most, or mourne and sing,
Mourne for our Prince, sing for our gracious King :
Or sing ? our Prince is hence to Heaven set,
and mourne ? Our King by Traytors was beset.

xxx	e	Andreas apo.	er. 16	6, 33	0	S 9

The fourth of this Month our hopeful Prince died, and the
fift day was that Trayterous and damnable practise of the
Ponder Treason extended. Wherein wee may note, that
ther was neuer two such fataldaies extended to one Prince
so good and gracious (I meane as the fift of August, and
the fift of November) and preferred so wonderfully.

December hath xxxi. daies.

Now Fowlers let their Lime-twigs Birds to take,
whilst traps for Innocents some people make:
Some now prepare to spend some of their store,
but God the next yeare sends them much the more.

A Prognostication. The Explanation and vse of the former Table.

Explanation.

The former Table consisteth of foure Columns, which haue foure vses, as followeth.

The first Colunne descending vpon the left hand, containeth the names of all the Kings successively all along to the foot of the same.

The second containeth the yeare, moneth and day the King or Queene it standeth against, beganne their reigne in.

The third containeth the quantity of time that any King reigned, expressed by yeares, moneths, weekes, & dayes (according as they reigned) by the first syllable of the same, as Mo. for Moneth, &c.

The fourth and last row sheweth how long it is since the ending of the reigne of any King: and also what day of the moneth they dyed on.

Now if you would also know how long it is since the beginning of the reigne of any King, see how long it is since the ending of the King next going before, and you haue your desire.

The vse.

Seeke out the name of the King required, and then direct your eye in a right line rightwards, and you haue your desire under the proper Titles.

Example.

1614. It is required to know when Queene Elizabeth began her reigne, how long shee reigned, how long it is since the ending of her reigne, and also how long since the beginning of her reigne.

First, finde Elizabeth in the first row: in the next 1558. Nouem. 17. and then she began her reigne: In the third row is 44 yeares, 4 moneths, 15 dayes, so long she reigned. In the last row is 12. March. 24. and so long it is since she dyed, March 24. 1614.

Then if you desire how long it is since shee began her reigne, looke how long it is since Q. Mary, the last prince before, ended her reigne, which is 56. Nov. 17. you desire. And this differeth from all other Computations.

Hopton. 1614.

To know when the Moone will be full South euery day this year.

Moones Age.		Her being South.	
1	16	11	48
2	17	2	36
3	18	3	24
4	19	3	12
5	20	4	0
6	21	4	48
7	22	5	36
8	23	6	24
9	24	7	12
10	25	8	0
11	26	8	48
12	27	9	36
13	28	10	24
14	29	11	12
15	30	12	0

First finde her Age in the Kalender, which age finde in one of the rows upon the left hand this little Table, Descending or ascending, against which, in the third colunne, is the time of her being South. As the third of January was 1122 daies old, and South at two, and twenty foure minutes. And you must note, as heretofore I haue warned you, that all the increasing she cometh to the South in the evening, following the Sun, but in the decrease in the morning, going before the Sunne.

To know when the Moone doth rise and set after a new order.

Find (as before) her coming to the South: then in the fifth row in the Kalender is halfe the quantity of her shining set against euery day of the moneth, in houre and minute. Therefore the day being giuen, on which you would know the setting of the Moone, see what houre and minute stand in the fifth row in the Kalender against the day of the moneth proposed, which put to the hower of her being South, you haue her setting: or counted backwards from her being South, you haue her rising; which also doubled, is her continuance about the Horizon.

A Prognostication.

Example.

1614. The third day of January the Moone is this dayes old, increasing, wherefore shee commeth to the South at two of the clocke, and 24 minutes after noone then in the fifth rowe in the Table. Per, against the 31st day of January is 5 houres, 22 minutes, which if you add to the Moones being South, viz. to two houres, and 24 minutes you haue her setting, which is at 7. and 46 minutes at night. Then from 2 and 24 minutes after noone, count, houres and 46 minutes backward, which fallies at 9 and two minutes before noone, her rising. Add 2 and 24 minutes to 12, so haue you 14 and 24. from which take 5 and 22. so haue you 9 and 2 minutes, as before. Double 5 and 22 minutes, so haue you 10 and 44 minutes; and so many houres is the Moone about our Horizon. But in this I imagine the Moone alwayes in the Eclipticke; because her latitude is tedious to bee calculated for every day: yet if I haue leasure, I will adde in the Kalender her latitude for every day, whereby you may easily finde her rising and setting to the minute, and is most excellent for Sea-faring men; and indeede more troublesome then the making of one or two Almanackes, as now a dayes they bee made, I mean for the most part.

To know how long the Moone shineth euery day.

If the Moone increase, finde her setting, and the Sun setting: for so much as the Sunne setteth before her, so long she shineth. But if she be past the full, as in decreasing, see how much she doth rise before the Sun, so long doth she shine.

Example.

The third of January 1614 the Sunne sets at foure of the clocke and 37 minutes: the same day the Moone sets at 7. and 46 minutes, which is three houres and nine minutes after the Sunne: therefore the Moone shineth three houres and nine minutes in the evening.

Hopton. 1614.

To know the houre of the Night by the Moone.

Finde before at what of the clocke the moone will bee South, and that keepe: then looks in any ordinary Sun dyall what of the clocke the shadow of the Moone poynteth at, noting how much it wants. or is past 12 of the clocke in the Dyall: if it want of 12, the true houre of the night wants so many houres of her being South. But if it be past 12. so many houres as it is past 12: you must ynt to her being South for the true houre of the night.

Ex ample.

1614. The third of January, the Moone is South at two, and 24 minutes: then looking at night in a Sunne dyall. I finde her shadow at three of the clocke after noone, which is three houres after, which I put to 2 and 24 minutes, the time of her being South, so haue you 5, 24 minutes, the houre of the night.

To finde the high-water in most Coasts of England, &c. as also vpon what poynt of the compasse it floweth *in any of these Coasts.*

First, as before you bee instructed, finde what houre the Moone will bee South: for then you may truly conclude it is high water at South-hampton, Quindborough, & Portsmouth: for there the South, & North Moones make a full water.

But if you desire the full Water in any other Coast about this Kingdome, in the ensuing Table find the name of the place, and see how many houres and minutes be annexed therunto in the row vnder M. M. which if you adde to the time of the Moones coming to the South, you haue the time of high water for the place required,

C 3

And

A Prognostication.

And for your further delight, I have adioyned the points of the Compasse that the Moone must bee on to make a full Sea: In which wee may note the wonderfull and rare vse of the Load-stone, whose diuers vertues, motions, and hid secrets, were neuer so much discovered, as of late it hath bene by two famous Doctors. that is, Doctor Gilbert in Latine: And now this last yeare 1613 Doctor Ridlev, Medicus eruditus (my very good friend) of whom we may say, Vincit omnes, et Nemini secundus. His Booke is intituled, A short Treatise of Magnetical Bodies and Motions, which I with all sea-faring men to strew.

Name, of the Hauens.	H. M	Points of compasse

Callice, Rye, & Winchelse	15	S. by East A. by A.

Example.

The third of January 1614. It is required to know the full water at London-bridge: by the Table before I finde the Moone, that day, is South at 2 of the clocke, and 24 minutes after noone: Then in the last Table, against the name of London, I finde 3 houres, which added vnto 2 and 24 minutes, maketh 5. and 24. I conclude it is high water at 24 minutes after five at night.

Hopton. 1614

As of any other. And you must note your Spring-tides and full Moones, &c. being in the Tides sooner and greater then ordinary: so doe the windes, as many times is seene, when the floods in Westminster-Hall is all over-flowne, &c.

To finde the houre of Sunne-rising
and setting, the length of the Day
and Night, with the continuance
of Twy-light.

Iⁿ the ensuing Table first finde the moneth in which your question is made, in the first row upon your left hand: and in the next row, right-wards, finde the day of your moneth, or the neereſt unto it, they stand against every moneth three times, thus: 1. 10. 20. under the Title of dayes. The day of the moneth found, proceede right-wards against the said day, so shall the houre and minute of all the aforesaid offer themselves to you, under their proper Titles in the head of the Table.

Example.

January the first, I desire all the aforesaid: first finde January, and in the second row, the first day: against which in the third row, is 5. and 34 minutes, the break of day, as in the head of the Table it is written. The next row hath 8. houres, no minutes, Sunne-rising: the next hath 8. houres, no minutes, the length of the day, and so forth, as it is plaine, so is the night 16. houres long, Sunne set at 4. and Twy-light ending at 6 of the clocke.

A Prognostication.

It an

A Prognostication.

Of the Eclipses this yeare 1624.

FOUR Eclipses shall bee noted this yeare vpon the superficies of the terrestriall globe; that is, two of the Sunne, and two of the Moone: of which the first of the Sunne shall not bee obserued with vs, but all the rest in part, or wholly, we shall see.

Of the first Eclipse of the Sunne.

THIS Eclipse, notwithstanding the Sunne being vnder our Horizon at the time of the Coniunction, yet if it were above the Horizon, in respect of the Meridional parallax, we should not see the visible Coniunction: Therefore we will leave it for our Travellers to bring newes of from Noua Guinea, and such places that haue about cxxii. degrees of longitude Eastwards of vs, and about xxxi. degrees of South latitude: to them it will bee a great Eclipse about one of the clocke after noone. During foure houres, his whole body being very neere darkened on the xix. Day of March.

Of the first Eclipse of the Moone.

THE xiiii. of April, but the xiiii. according to the reformed account, at ii. of the clocke, xxiii. minutes, and xliii. seconds shall the Moone begin to enter into the shadow of the earth, her body beginning to bee darkened vpon the East side, and vpon the lower part hauing then lxi. minutes, and lxxii. seconds of South latitude, her greatest obscuration will be at iii. of the clocke, xlviii. minutes, and xxv. seconds, neere the Dragons taile, as seven twelue parts, that is halfe, and one part ouer: and then at v. of the clocke, xi. minutes, and vi. seconds she will be out of the shadow of the earth, whereby the whole duration, from the beginning to the ending, will bee two houres, xlviii. minutes, and xvii. seconds, according vnto Copernicus and Rheinholdus: But

According to Tychon.

It happeneth the fourteenth day at 3 and 15 minutes, and 11 seconds, the greatest obscurity being at foure, 10 min.

A Prognostication.

10 min. and 35 seconds, and the ending at 5, 47, min. and 31 seconds in the morning: so that the whole duration is two houres, 25 minutes, 20 seconds. the pointy darkened being 5, 24 minutes, and 54 seconds, which is not li the one halfe: her latitude in the greatest darknesse being 48, minutes, and 17 seconds.

Of the second Eclipse of the Sunne.

The 23 of September, according to our account, but the third of October according to the Romane account, at 11 of the clocke, 18 minutes, and 33 seconds before high noone, shall the body of the moone, vpon the west side the Sunne, and also vpon the lower part the Sunne, begin to comey her selfe betwixt our sight and his light, according to a visible conjunction. And at 28 after high noone he will bee in greatest obscuration: and at one of the clocke, 18 minutes, and 7 seconds, the Moone will be passed ouer, or from betwixt the sight of vs and the Sunne: whereby the continuance of the Eclipse will bee two houres 19 minutes, and 14 seconds, his body being darkened 5 digits, 44 minutes, 9 seconds, which is not all the one halfe of his body. And this agreeth with the doctrine of Copernicus, and Reinholdus, according to whom, the latitude of the Moone, at the beginning of the Eclipse, was 15 minutes, and 21 seconds: and at the ending 20 minutes, and 17 seconds, both South, and descending from the Equitricke.

According to the doctrine of TYCHO BRAHE.

Some translate Origanus bookes, and falsly tearme it The doctrine of T. B. as you may perceiue, comparing his booke with this ensuing.

This Eclipse with T. B. beginneth at 10 of the clocke, 51 minutes, and 58 seconds before noone, hauing South latitude but 14 minutes, and 20 seconds: and vpon the same 23 of September, as before, he is in greatest obscuration at 50 minutes after 11 of the clocke: the Eclipse endeth, or was discharged of the Moones interposition at

Hopton. 1614.

at 48 minutes after high noone, the Boones latitude being 18 minutes, and 34 seconds South descending: whereby the whole duration, or continuance, is but one hour, 15 minutes, 53 seconds: and no more doth Tycho allow.

Of the second Eclipse of the Moone.

Vpon the seventh of October, which is the twentieth according to the reformed account, at two of the clocke, 26 minutes, 29 seconds. after noone, the Moone is eclipsed: the middell. or true conjunction, is at three of the clocke, and 29 minutes, and the ending of the eclipse is at foure, 52 minutes, and 21 seconds: the duration two houres, and neere a halfe; but this Eclipse is much lesse to the Easterne people, as Graecia, Macedonia, Asia, &c. For to the Westerne Regions, as France, Spaine, England, Scotland, Ireland, America, Mexicana, and the adjacent Islands they shall not see the same.

Iudgements of this yeare.

Mixing the effects of the Eclipse with the Lunations, and other powerfull Aspects, which the Significators and Emballators of heauen this yeare pronounce vnto vs as the opposition of Saturne and Iupiter the twentieth of Iune, &c. we cannot well cleere our selues in generall, or particular, of many strange accidents which will amaze and distract diuerse If Libellers, and disseminers of letters bee fore-tailed, and intercepted, let the glory be vnto God, and the shame to themselves: For when villany is unmasked, vertue sheweth. While tongues, and variable rumours will seduce, or induce many, but nothing for their good The greater sort deal in greater matters: Quod supra nos, nihil ad nos. None but the Eagle may gaze vpon the Sunne, least they bee strooke blinde: Perit us I say; God as she is iust, so is her mercifull, her first childe, then striketh: There is a Jonas to exhort before Ninue bee destroyed, the great God of Nature lends fore-warners, called of the Philosophers Prodromi, which fore-tell when a misery shall ensue, witnesse the extraordinary calamities

A Prognostication.

perature of the season before the death of our most hopefull Prince, where the land seemed to bee threatened with the extraordinary violence of the winde, and unaccustomed abondance of wet: the seas, especially our neighbouring seas, and the Voylois thereon, felt the rough and cruell handling of the mercuriell waues, and furious winde; which calmed and ceased with the marriage of our veruous Princesse, the Lady Elizabeth, which like the precious influence produced at the conjunction of some Regall Constellations, mitigated and alayed the fury of these raging Petrels.

As for the Earth-quake in Montgomery-shire, &c. happening the last yeare, the fifteenth day of March, since the cause is naturall, I will say nothing; onely the Philosophers doe affirme, it causeth the pestilence, by reason of the contagious vapour: for the Ayre inclosed is putrified and poisoned by reason of the long inclusion, or imprisonment of the same in the earth, which infecting the aire, infecteth also them that breathe in the aire. The Latines call it Mephitim, which is a stench, or ill-savour, proceeding of corrupt matter mixed with earth: and therefore Virgill saith:

Senumque exhalat, opaca Mephitim.

And at such a time it is thought that the safest dwelling is in thicke houses in towne that consist of waxes, and arches, and such as be pendant, as hath bene observed in Naples, where the quarter thereof that is solid, and not hollow, is subject to such casualties. But finishing this.

This yeare further promisseth danger to passengers, much treachery amongst them that are nearest kinde: Lawyers are likely to gaine as much by errors as by truth, and therefore shall apply themselves greatly to the finding out of the same, whereby the error of one, howsoever unwittingly or wilfully committed, shall profit himselfe, and much a number.

As for Tradesmen they shall chuse after diuers fashions: some shall live simply by their faculty, or rather by their trade, whose wealth shall be durable.

Some shall grow rich by their owne Trades, but dishonestly, whose wealth you shall see waste as the snow in the Sunne.

Some shall be stufed with wealth, as a Canon over-charged

Hopton. 1614.

charged with powder, insomuch that they shall break; the report whereof shall fly into the eares of the multitude, with admiration of the cracke.

So then some shall seeme lesse then they are, making their wealth onely appeare by their widowes.

Some shall seeme more then they are, whereby attracting, or exacting the goods of their friends, shall open their villany vnder the name of a Bankerout, of which diuers are to be feared.

The Usurers conscience, or rather cruelty, is likely to increase as fast as the money: I meane not the plaine-dealer with ten in the hundred, but he that hath more affinity to the Usurer.

Physicians and Lawyers shall much differ, whereby in the first you shall hardly finde threes of one sect: and in the other, two of one opinion.

Also, Gentlemen shall bee much giuen to wast, and Prodigality shall chase hospitality out of the country, so that one Taylor shall bee in more request then ten Seruing-men; for which Foot-boys are more tyasably guarded then truly regarded.

The Sect of Puritans are like to fall at great odds with good wakes and fasting-dayes, but there is hope of an Ampler.

Crui is like to be so common amongst all professions, that it is not materiall to bee fore-told: it is likely this yeare, to sit in eminent places, and be harboured in great hearts: Some are likely to faile in their expectation; but if crui haue effects, more the euent: for this yeare would seeme to cause some strange occurrences produced thereby.

Lastly Beere-brewers had boyling their beere are like to kill more then the pestilence. And so I cease commending such to the Pilory.

Of the latitude of the Moone for euery day this yeare.

FOR some Sea-faring mens sakes, which could not well calculate the latitude of the Moone: At their instance I haue vnder-gone the labour, as to set it downe euery day this yeare, according to the Doctrin of Tycho Brahe: of which you must note that it standeth in my Kalender, in the fifth row against the day

A Prognostication

Day of the Month, with certaine letters to expresse the Denomination of the latitude: If therefore the Moone bee not in the Eclipticke, shee is either vpon the North or South side the same, which is called North or South latitude.

Then being vpon the North side, shee is either going frō the Eclipticke, which I call Septentrionall Ascendant, noted thus in the head of the Kalender, S. A. or rise shee is coming towards the Eclipticke, called Septentrionall Descendant, and noted thus, S. D.

But being in South latitude, and going from the Eclipticke, I call it Meridionall Descendant, noted with M. D. but coming towards the Eclipticke, it is called Meridionall Ascendant, noted with M. A. and with any of these denominations change it is noted against the day of the Month with the first letter of the same.

And this latitude causeth the Moone to rise much sooner or later, and to bee seene more into the North then the Sun at any time is, as hauing North-latitude and more directed into the South, as hauing South-latitude, &c. And this is more then ever yet was set in any Almanacke, which I haue done at the request of some that minde to traueill.

An Apology for Prognosticators.

Palidus luna pluit, rubicunda flat, albe serena.

WHy should not man that dailie sees
The heauens how they moue,
That sees, as it were, in a glasse
The Starry vale aboue?

That sees in Zodiacke or without,
How all the Planets glide,
As they do moue vpon their poles
Or senerall centers wide:

That

Hopton. 1614.

That sees the *Whale*, the *Bull*, the *Cro*
Medusa and *Orion*,
Ariadne, bright *Andromeda*,
Boetis and the *Lyon*.
 With all celestiaall bodies else
 Within the golden Wall,
 Since they were fram'd of *Chaos* first,
 As things confused all.
 If man behold their motions thus
 With their combustions all:
 And know their nature euery one
 And when they rise and fall?
 Why should not he be bold to iudge,
 Since he may boldly say
 The Planets hurle their influence down
 Vpon vs euery day?
 Each beast can iudge (and why not man)
 Of future stormes that fall:
 And euery well conceived man
 Giues credite to them all?
 The swine, the Peacocke, and the Hearn
 Do cry ere raine shall lite:
 The flies, and gnats fore-know the same,
 When they so sting and bite.
 The foolish Ass fore-knowes of raine,
 And then his eares will shake.
 So doth the Bats, and then to fly
 Abroad they will forsake. (come
 The Dolphin knowes when raine shall
 And Swallowes, without doubt,
 For then vpon the quiet wanes
 Theyle skipping play about.
 The Hedge-hog knowes which way the
 Or tempest shall arise, (wind,
 And

A Prognostication.

And then this hole that's tow'rd the same,
To stoppe with haste she hies,
The Rauens can likewise fore-tell,
When heate shall after come:
So can the Crows, and they'le not ceaso
To gape against the Sunne,
If sencelesse things, that be deuoyd
Of Reason, and of Art,
Can thus at large foretell to vs
What falleth to our part:
Why should not man, the very shape
And Image of his God,
In whom the grounds of reason be
And daily make aboad
Prognosticate and set dowe Rules.
Infallible and true,
As well as Asses, Beasts and Birds,
That neuer reason knew?
Yea gentle reader be it knowne,
That thou by Art maist heare
More curious Aphorismes, then
Can by such meanes appeare,
Of Pyromancy I not speake,
Ne Geomanticke spels.
That do adiure such Dæmons vp
As in our Center dwels.
But onely of Astronomy,
Which for my countries sake,
And to maintaine the grace of it,
These paines did vndertake.

*Spernant me nulli, quamuis sim corpore parua,
Nisi simul ingrati spernere magna velint.*

FINIS.
